### Penjelasan

#### 1. Routing

File routing terletak di routes/web.php. Routing dibuat dengan nama **/daftarperkuliahian**. Routing dibuat untuk mengarahkan browser ke method daftarperkuliahian() yang ada di controller.

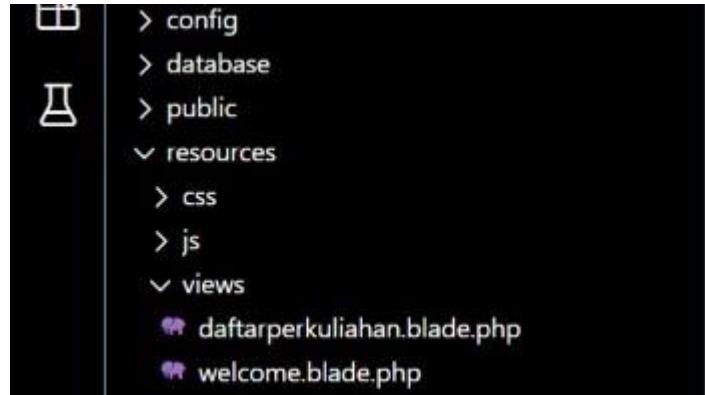

#### 2. Controller

File routing terletak di app\Http\Controllers\Perkuliahanc.php. controller dibuat dengan Method dengan nama **daftarperkuliahian()**. Controller dibuat untuk memungkinkan mengirim data perkuliahan (tanpa database) ke view.

#### 3. View

File view terletak di resources/views/daftarperkuliahannya.blade.php. view digunakan untuk menampilkan data yang dikirim dari controller dalam bentuk tabel.

### Syntaxnya

#### 1. Routing

```
<?php

use App\Http\Controllers\Perkuliahannya;
use Illuminate\Support\Facades\Route;

Route::get('/', function () {
    return view('welcome');
});
Route::get('/daftarperkuliahannya', [Perkuliahannya::class,
'index'])
->name('daftarperkuliahannya');
```

#### 2. Controller

```
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;

class Perkuliahannya extends Controller
{
    public function index()
    {
```

```
// Data tanpa database
